Environmentally Friendly, Recycled Waterhog Eco Mats

An entrance floor mat is the first line of defense against contaminants and particles from entering your building. Mat Tech brings you a new line of Waterhog ECO floor mats not only removes dirt, debris and moisture while providing a safe walking surface, but also consists of virtually all recycled materials.

In addition to gaining valuable LEED certification points, our Waterhog ECO mats are Certified Green Products. To meet this strict standard, the surface material is made with 100% PET post-consumer recycled fiber, which is reclaimed from drink bottles. Additionally, the rubber backing consists of 15% post-consumer recycled tires.

The Waterhog ECO Premier Entrance Mats and the Waterhog Grand Premier ECO Mats are heavy-duty floor mats ideal for high-traffic locations. These Waterhog door mats have a unique diamond ridge pattern which effectively removes dirt and water from shoes. The water dam border holds moisture within its trenches and off of the floor. The rubber-reinforced surface, borders and backing give these Waterhog ECO mats superb durability and longevity.

Our Waterhog ECO entrance mats work well both indoors and outside. The surface of these door mats is anti-static, which allows them to dry quickly and helps prevent them from fading and rotting.

These Waterhog Eco mats can be cleaned by vacuuming. To remove dried mud and other stubborn debris, these floor mats may be hosed off and hung dry or cleaned with a shampoo or steam extractor.
